

G6-M4 – Topic G

G6-M4-L23-25: When delivering this lesson, keep in mind that the objective is learning a new notation that builds on their understanding of number relationships & expressions. Therefore, students will only have cognitive energy to focus on the notation, if they're posed with numbers that are readily accessible to them. For this reason, carefully consider the role that fractions, mixed numbers, large numbers, etc. will play in the example problems you choose.

G6-M4-L26-29:
